

Get API Key from Google AI Studio:

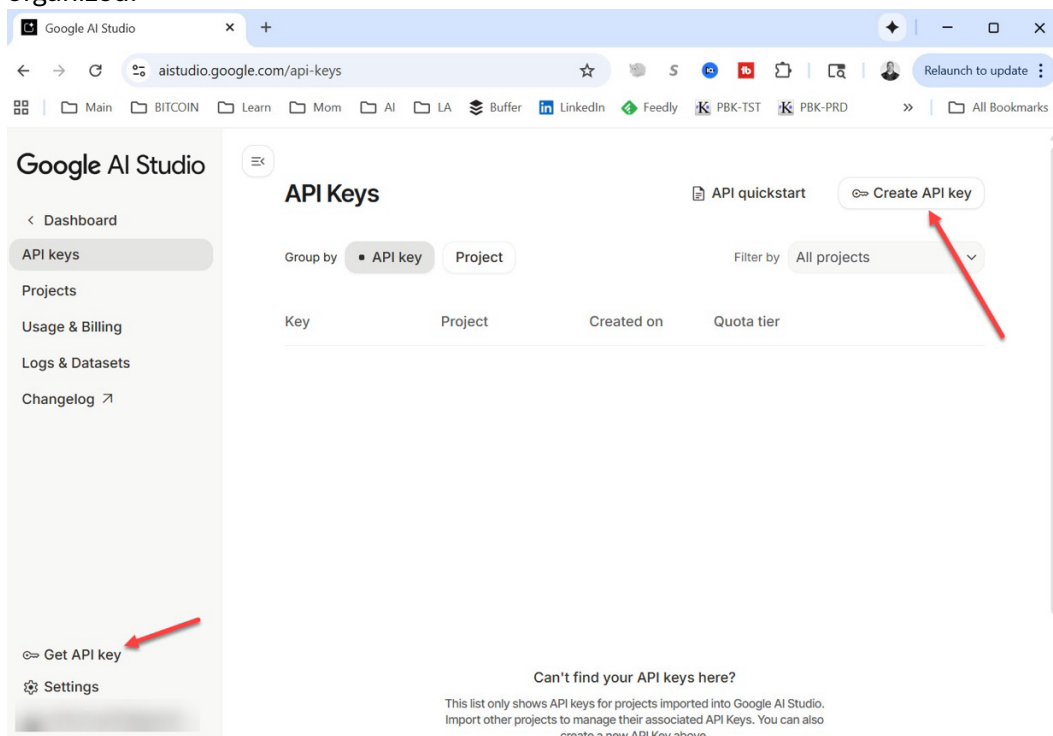

1. Go to <https://aistudio.google.com/welcome>
2. Select „Get started“ and Log in into your Google Account:

3. Accept the Terms and Create Your First Project

Once inside, you'll be prompted to review and accept Google's AI Studio Terms of Service.

After that, create a new Gemini project: This is where your keys and API activity will be organized.

4. Create your Gemini API Key

From the API Keys page, click “Create API Key.”

Give your key a name (for example, “GenAi-Workshop ”), and select the project you just created.

Within seconds, your key will appear: Just click Copy to add it to your clipboard.

That’s it! You’re now ready to call Gemini programmatically and use it for the workshop.
